The external pipework connecting the raw water source (dam) and the storage infrastructure (JoJo tanks) requires immediate replacement on the Vicky Bruwer farm (Olierivier). This necessity stems from significant degradation and material compromise observed due to prolonged exposure to adverse environmental and weather conditions. Continued use of the compromised pipework poses a risk to system integrity and water delivery efficiency.

Required Scope of Work Summary

The overall scope encompasses three critical areas to ensure the functional rehabilitation and operational readiness of the water system:

- **System Maintenance and Servicing:** Comprehensive maintenance is required for the entire water filtration system, including the crucial servicing, inspection, and calibration of all associated components, specifically the dosing pump(s), backwash pump(s), and primary filter pump(s).
- **Complete replacement of the identified degraded external feed pipework** is mandatory to restore resilience and reliability in water conveyance to the storage tanks.
- **Site Preparation:** Urgent cleaning and remediation of the immediate and surrounding areas of the dam and pump station must be executed prior to the commencement of any technical or installation works. This is essential to ensure a safe, accessible, and compliant working environment for all personnel.

Bidders **must** conduct a mandatory, non-chargeable site assessment prior to submitting a final quote.

NB: Failure to meet the above requirements or submission of documents, will lead to disqualification of the quotation

The following terms and conditions will apply.
